TRY *Lewisia Heckneri*

=====
=====
=====
In YOUR ROCK GARDEN---This Way:

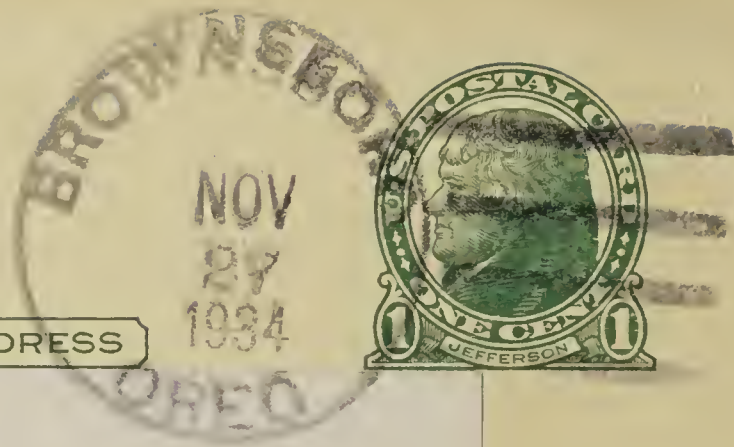

Select a *raised, well drained, north facing location*. Soil must be porous, *sandy, gritty* or mixture of rock chips and loam six or eight inches deep. No clay, no humus. Shade from midday sun with rock or shrub. Leaf rosette should be half-inch above surface; set horizontal to perpendicular. The plant is alpine in nature, slow in growth, and extremely long lived. Torrential rains, sleet, snow or ice fail to destroy them in their stormy mountain homes. Once planted, don't move, cover or feed them.

Lewisia (Oreobroma) Heckneri, has thick, fleshy roots; evergreen leaves in flat basal rosette, conspicuously fleshy-toothed; flowers borne in panicles on eight-inch scapes. Color, rose-pink, varying to pale yellow in some specimens. Closely related to *L. Finchi* and *L. Howelli*.

Postpaid price: 3 large \$1; 4 medium \$1. March to Oct. delivery.

JOHN H. HECKNER, Brownsboro, Oregon. No catalog issued, 1935.
